

BULK STOCK MANAGEMENT

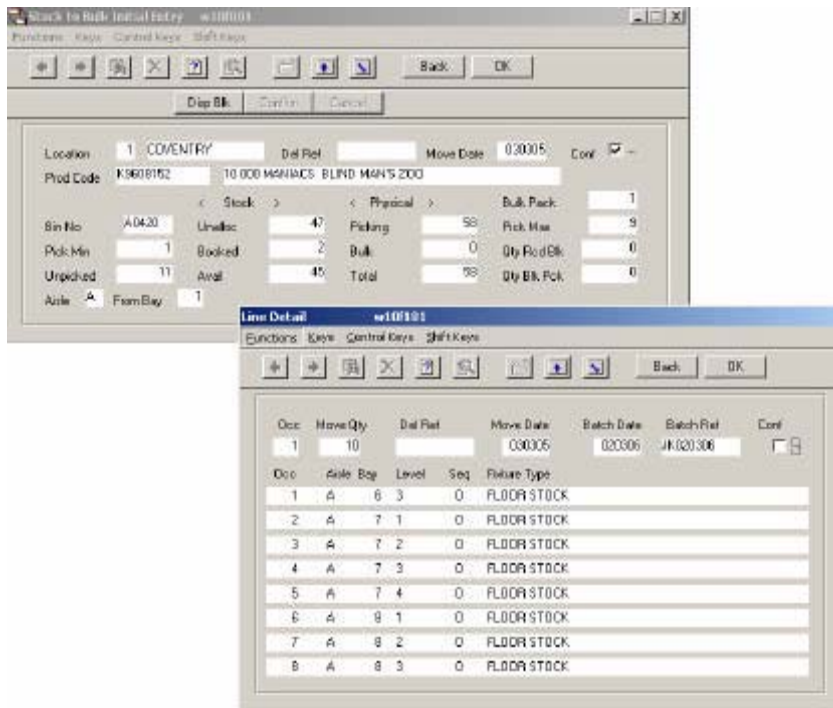

KDS Bulk Stock Management gives you full visibility and control of all stock entering, leaving and moving within your bulk stock area.

Warehouse Set Up

KDS Bulk Stock Handling provides the flexibility needed to reflect individual warehouse operations. Define each bulk stock fixture by aisle, bay, level, sequence and type, according to the layout of the warehouse. Configure each warehouse so that receipts are either booked into the picking area or directly into the bulk stores. If received directly into bulk, further flexibility allows for interactive operator selection of a suitable free fixture, or automatic system selection based on information pre-recorded against the product and location environment.

Bulk Stock Movements

Use the bulk stock movement routines to control the movement of goods into, out of and within the bulk stores. Movement dockets are triggered automatically. Print bulk stock labels and separately identify each pallet of stock by batch expiry date sequence, ready to replenish picking. Replenishment can be initiated either manually, based on the *products below pick minimum report*, or automatically using the automatic let down routines.

Receiving goods into the bulk stores

Use the stock adjustment routines at any time to make further adjustments to the bulk stock records, for example following stock take. Perpetual inventory is fully supported by KDS and counts can be carried out by count group, product group, area or supplier.

Warehouse Integration

Reduce administrative costs, achieve greater productivity and maintain accurate real-time stock records by taking advantage of standard KDS integration into sophisticated warehouse technologies such as radio data terminals, voice recognition software and automated conveyor systems.

Analysis and Monitoring

Bulk stock reports and enquiries enable you to monitor your bulk stock situation, including free fixtures, the status of movement dockets and stock below picking minimum. Track all stock movements into, out of and within the bulk stores using the bulk stock audit trail.

Key Features

- Receive stock directly into the bulk stores
- Set up location details to match warehouse layout
- Bulk stock adjustments
- Stowing dockets and bulk stock labels
- Record and control movement of stock to, from and within bulk stores
- Control reports and enquiry facilities

Related Products and Services

- KDS *Goods In*

Integration

- RDTs
- Voice recognition software
- Warehouse management systems
